

TEST REPORT

CLIENT: HUADING GROUP CO., LTD.

REFERENCE: GB/T 4207-2012/IEC 60112:2009

TEST ITEM: COMPARATIVE TRACKING INDEX (CTI)

SAMPLE: PCB

REPORT No.: 10344E

TEST RESULTS SUMMARY:

The samples were tested by the indicated test method within this report. Actual detailed test results are enclosed.

PCB CTI600

(1 of 5)

This report applies only to the sample(s) tested, and is not necessarily indicative of the quality or condition of apparently identical or similar products. All or part of the processes involved in the testing may be subcontracted at Microtek (changzhou) Laboratories discretion. As a mutual protection to clients, the public, and Microtek (changzhou) Laboratories , this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from Microtek (changzhou)Laboratories. In addition, this report shall not be reproduced, except in full, without the written approval of Microtek (changzhou) Laboratories .

SUBMISSION IDENTIFICATION

The following sample(s) were submitted and received in a suitable condition for testing as requested:

TEST SAMPLES SUBMITTED: 2015-04-27

TEST DATE: 2015-04-27~2015-04-30

SAMPLE DESIGNATION: PCB

SAMPLE IDENTIFICATION: PHIE150385 BE1FGA_DOUBLE

SAMPLE QUANTITY: 1 PCS

COMPARATIVE TRACKING INDEX (CTI)

TEST SPECIMENS

The size of the specimen shall not be less than 15 mm x 15 mm. The thickness of the test specimen shall be 3 mm or more. Individual pieces of material may be stacked to obtain the required thickness of at least 3 mm.

REFERENCES

GB/T4207-2012/IEC 60112:2009 Method for determining the comparative and the proof tracking indices of solid insulating materials under moist conditions

METHOD

The specimen is placed horizontally on the test bench. Specimen less than 3mm in thickness shall be stacked till the thickness is not less than 3mm.

The electrodes run parallel in the vertical plane, with a spacing of $4\text{mm}\pm0.1\text{mm}$. Adjust the pressure of the electrodes to the specimen to $1.0\text{N}\pm0.05\text{N}$. The drops shall fall at the center of two electrodes, at a time interval of $30\text{s}\pm5\text{s}$.

Adjust the voltage to a pre-selected value and start 100 drops test. It's likely that no tracking failure occurs or some tracking failure occurs within 100 drops to the specimen. Continue testing at other test points on the specimen with higher voltage, until the maximum voltage is obtained for no failure at 5 different points with 50 drops. This voltage value is CTI.

RESULTS

The test result indicated the comparative tracking index was CTI600, See attached test data sheet and photo for actual measurements.

CTI

Sample Designation	PCB		Test Date	2015-04-27~2015-04-30	
Sample Identification	PHIE150385 BE1FGA DOUBLE		Ambient	23°C, RH: 50%	
Sample No.	10344-1	10344-2	10344-3	10344-4	10344-5
Thickness (mm)	1.514	1.516	1.519	1.515	1.514
Drops	600V	100(6)	100(6)	100(6)	100(6)
CTI		CTI 600			
Note:		(5) : Flamed, melted and eroded			
		(6) : Insufficient tracking-test terminated at indicated value
